Conference paper | First Online: 18 August 2023

Part of the Lecture Notes in Electrical Engineering book series (LNEE,volume 1040)

Abstract

This article presents a detailed review of different methods adopted from earlier to recent years to achieve low Specific Absorption Rate (SAR) value for mobile phone antennas. SAR value should be within the limit according to the available standards. The human fraternity should limit the use of mobile phone. In order to limit this, some proven biological effects caused due to heavy radiation exposure of

of international conference on advances in computing & communication engineering (ICACCE-2019). IEEE, Sathyamangalam
