INDUSTRIAL VISIT

Industrial visits is a powerful educational strategy that enriches students' understanding by immersing them in real-world environments. This hands-on approach goes beyond traditional classroom settings, offering students the opportunity to bridge the gap between theory and practice. Industrial visits provide a dynamic and engaging platform for experiential learning, fostering a deeper comprehension of academic concepts and cultivating essential skills for future success. One of the primary advantages of industrial visits is the practical application of theoretical knowledge. In the classroom, students often encounter abstract concepts and theories. However, witnessing these theories in action during industrial visits brings them to life. For example, a mechanical engineering student studying thermodynamics can observe the application of these principles in a manufacturing plant, gaining a tangible understanding of how theoretical concepts translate into real-world processes.

Explaining the various circuits working procedure by simulation using FluidSIM software

FluidSIM is a comprehensive software for the creation, simulation, instruction and study of Hydraulic, Pneumatic, electro-pneumatic, electro-hydraulic and digital circuits. We can create circuits easily by using drag & drop option. We have to place the items in the circuit as you want to view them and build the circuit intuitively. Students can also understand the working of various circuits through real-time simulation which is Simple and effective.

simulation of working of double acting cylinder using FluidSIM

simulation of working of Cascade Circuit using FluidSIM

Outcomes:

- ✓ Gaining awareness with software available for the simulation of hydraulic/ pneumatic components & circuits.
- ✓ Students will able to understand the working of hydraulic & pneumatic components & circuits.
 - ✓ Able to design the hydraulic & pneumatic circuits for required application.
